

Give your best tour yet!
GPS Commentary System - Wireless

Advanced Performance Reaches New Heights

People and companies just like yours are using our technology to provide multilingual and multi-topic sightseeing experiences, factory tours, themed holiday tours and authentic cultural experiences. And even as others try to catch up, the many features built into TriggerPOINT will keep us years ahead.

Small. Portable. Up to 12 languages.

Designed for sightseeing operators where portability and flexibility are essential to fleet management, the carry on, carry off TriggerPOINT multilingual commentary system removes the operational and visitor restrictions affiliated with hardwired solutions.

Passengers use wireless receivers and headsets and suddenly it's clear. Passengers are free to roam throughout your bus and boat with no seating restrictions. They can go to the bar. Move between decks. Or move to the back of the bus. All this without any tour interruptions.

Solid Design. Solid State.

Solid state is standard on all of our GPS tour systems. Engineered for high vibration environments, TriggerPOINT features no moving parts and an on-board Compact Flash card with high capacity memory for all your languages and tour topics.

The commentary system also includes a Driver Control Panel offering play, pause and stop features - in all languages, on and off your sightseeing routes. This is ideal for safety announcements, off-route commentary, and promotional audio.

Available in 4, 8 and 12 languages, TriggerPOINT offers you flexibility, including license free software for creating and managing your tours. And since TriggerPOINT is designed to take advantage of every logistical consideration, this means you get faster performance and greater efficiency when creating and managing your routes.

WHY WE'RE BETTER

- + 4, 8, or 12 channels
- + Portable GPS-Systems
- + Passengers are unrestricted
- + Open deck, multi-deck tour vessels
- + Rechargeable wireless devices
- + Free Feature rich software

TRIGGERPOINT HEADEND

WIRELESS RECEIVER

HEADPHONES

Free Software. No Licenses.

If you're purchasing a system why do you have to pay for software? We think Route Builder Software should be free - and it is. We've not only updated our software with enhanced features, our software has been designed from years of experience in the field. We've encountered every logistical challenge you can think of, and we've applied our in-field knowledge by creating easy to use software anyone can use - for any situation. We don't hire techies to run our software. And you shouldn't have to either.

Better Designed Systems.

Our systems aren't just about GPS. With Remote Power-Up Connection and RJ45 ports with LED status lights to indicate active power and communications with the GPS receiver and control panel, our systems stand out. We've added a Relay Output connection for external signs and included free software so that you can create and manage your sightseeing routes from the comfort of your office (or on the road).

But that's not all. We've added a new AUX connection for audio amplifiers and a new USB connection to synchronize and update your tours using our Route Builder software. Add an optional audio chime that informs passengers that commentary is about to begin and store 100's of hours of commentary.

With a smaller physical size (170mm x 90mm x 45mm) and 12V - 24V operation with internal over current protection, you'll always have the perfect solution for any environment

GPS SOFTWARE BENEFITS

- + Capture and manage GPS trigger points quickly and easily
- + Supports directional GPS triggers
- + Easily define the size of a GPS trigger zone for each point of interest (POI) along a tour route
- + View GPS triggers and routes using Google Maps and Google Earth
- + Optional music between tour commentaries
- + License-free software - no ongoing costs
